

ENERGY SAVINGS

Energy Savings is Good for the Environment ... and Makes Good Business Sense!

Making the World “Greener!”

With all of the energy savings and environmentally friendly changes that have been recently added to our high quality walk-ins, now is a better time than ever to choose Tafco for any and all of your walk-in cooler and freezer needs. At Tafco, our staff has the experience and expertise to meet and exceed all of your needs and expectations. We have the capability to offer boxes with custom options to match your specific walk-in needs, as well as complete refrigeration packages that are matched perfectly to our boxes. Allow us to prove to you that we are the finest in the business when it comes supplying a great product at an affordable price. You can trust that when choosing Tafco you get the best “bang for your buck.” Tafco produces quality products that provided years of reliable, money-saving performance and will continue to produce that type of product for years to come.

The Best Costs You Less

At Tafco, quality is designed into our walk-in boxes long before the manufacturing process even begins. The friendly and knowledgeable Engineering and Sales staff is here, ready and willing to help you get exactly what you want for your specific walk-in cooler and freezer needs. Before shipping, we guarantee that all our walk-in units have passed every major code and test for smoke rating, electrical, toxicity, flame spread, insurance, sanitation, and national associations across the country. This gives you the confidence that your shipment will meet any local or national code, ensuring you peace of mind and a fully up-to-date product.

Custom Built Box Advantages

When you order a Tafco product you have the custom built box advantage! When a standard model will not fit your specific walk-in needs, Tafco’s design engineers are ready to go to work for you. Customization is possible because of our wide selection of optional features. Tafco coolers and freezers are modular and thus are easily expandable when more space or capacity is needed. Disassembly is simple if you need to enlarge or relocate a box. Precision formed panels, complete with urethane insulation, are lightweight, and easy to handle and maneuver. Each and every section has tongue and groove joints for a better, more secure fit.

Refrigeration

Tafco has many pre-engineered walk-in models, which means meeting your refrigeration needs is as easy as placing a simple order. There is no need to spend long hours configuring refrigeration. Design work is done upfront and beforehand, not on the spot. At Tafco, we use a patented refrigeration system which reduces energy consumption up to 40% in low ambient conditions. This is in addition to the increased energy savings resulting from our recent change to high efficiency fan motors. The systems use 20% less refrigerant, which decreases installation costs and adds to the environmental savings. On top of all that, the system operates at lower pressures, extending compressor life and increasing system capacity by 20%.

Energy Savings is Good for the Environment ... and Makes Good Business Sense!

Design & Features

- 4" inch thick freezer panels have over R-32 value "foamed in-place" urethane insulation (5" and 6" panels are also available)
- Easy installation of lightweight modular urethane panels, which include Tafco's "Surelock" positive cam lock, assures instant panel alignment
- Tongue and groove panels include standard "foamed-in-place" gaskets, assuring an air-tight seal
- Standard 10 year panel, one year limited parts warranty, and optional limited service labor warranty...please contact our Warranty Department for complete warranty information
- We've introduced new LED lighting, which is 10 times more energy efficient than incandescent lighting, contains no mercury, produces very little heat, and lasts more than 40 times longer
- New lighting controls and alarms which offer additional energy savings
- Modular design provides for fast and easy installation, expansion, and relocation
- Energy saving FRP
- Cam lift, self-closing door with magnetic door gaskets and closer
- Flush-fitting, condensation-free door frames
- We meet or exceed all Department of Energy specifications
- Both standard and custom sizes available with a variety of metal finishes

Energy Savings of up to 40% in certain operating conditions

Vinyl swing doors stop 95% of air infiltration
