

NEW SCREEDS

In our ongoing efforts to continually improve our products, we have changed our screeds to the new profile illustrated below. This will allow us to offer pre-made corners that will work for both standard and flat bottom wall panels. The task of installation is simplified as we are able to offer NSF-approved, wall to building floors without cove molding. No separate trim is required. In addition, little thermo conductivity occurs through the screed, and the screed provides a good convection barrier.

For more information, please contact Tafco through your normal customer service channel.

Available in all panel widths

STANDARD WALLS

FLAT BOTTOM WALLS
